

## **TEAM DIGNITAS GET KILLER™ INSTINCT!**

*Leading pro-gaming team sponsored by Killer™ NIC*

**London – June 3, 2008** - Team Dignitas, one of Europe's leading professional gaming teams, is pleased to announce Killer™ NIC as its latest sponsor.

Killer™ NIC, from Bigfoot Networks, is the gaming network card that provides smoother, more responsive gameplay and a competitive edge in all MMO and online First Person Shooter (FPS) games. Killer bypasses Windows® networking and offloads network traffic from the CPU to reduce game lag.

Team Dignitas has been running for five years and throughout that time has been at the forefront of the world's professional gaming community. As part of the sponsorship Bigfoot Networks will provide key players at Team Dignitas with its bestselling Killer™ M1 network card to boost frame rates and smooth gameplay, especially during intense action!

"Gamers are obsessed with many things and lag and their latency are definitely two big obsessions," explains Michael O'Dell, Team Dignitas Managing Director. "FPS is another major issue when it comes not only to top level but gaming at all levels. The Killer™ NIC addresses all of these, and from experience of using the card it certainly helps in all these areas. Our players will benefit from this vital piece of gaming equipment and we are happy to be working with a company that is looking out for gamers."

"Pro gaming is already huge and is only going to get bigger," said Harlan Beverly, co-founder and CEO of Bigfoot Networks. "We sought out the baddest team in Europe for a sponsorship opportunity and found them in Team Dignitas. What we like best is that Killer NIC already works with the games they dominate: pretty much everything."
